To Whom It May Concern:

I am pleased to offer this letter reference for R&B Cormier Inc. and their proprietary airborne precision biomass mapping technology known as **R<sub>2</sub>MAP™**.

TransCanada is one of Canada's largest transporters of natural gas and independent power producers. We have been using the services of R&B Cormier for forest cover inventory metrics and biomass due diligence for biomass energy projects since August 1995.

TransCanada is also in the process of working in association with R&B Cormier and their **R<sub>2</sub>MAP™** technology towards jointly developing compliance quality greenhouse gas quantification and monitoring protocols for forested lands to assist in meeting our environmental commitments in mitigating climate change. We feel that **R<sub>2</sub>MAP™** offers carbon sequestering projects technological, cost and time advantages in remote areas and welcome any inquiries from project carbon sequestering project developers interested in a reference on R&B Cormier's abilities and services for TransCanada.

TransCanada sees offsets playing a very important role in implementing GHG policy. Offsets provide compliance buyers like TransCanada with important access compliance instruments.

R&B Cormier Inc. comes with our highest recommendations. Please feel free to contact me at the above noted phone number and email address with any further questions.

Sincerely,

Srikanth Venugopal,  
Director, Environmental Risk & Trading
