TO WHOMSOEVER IT MAY CONCERN

Genesys International is one of the largest GIS and remote sensing providers in India and has operations in the USA and the United Kingdom. We have been associated with R&B Cormier Inc. since 2007 and are now partners with them internationally on precision biomass and forest land cover projects using their unique three dimensional remote sensing and biometric technology known as R-MAP™ (remote mapping automated photogrammetry).

Back in 2007 we had two of our GIS and remote sensing analysts (with no previous forestry or dendrology training) from Bangalore travel to Canada in order to be trained by R&B Cormier's senior R-MAP™ analysts and work on actual production projects over a four month period.

We represent the Company's R-MAP™ aerial forestry plot technologies and services in India and the Middle East.

We offer this letter of support to endorse R&B Cormier's abilities as professional trainers for the R-MAP™ technology transfer and R-MAP™'s unique methodologies that combine under cloud aerial imagery capture at multiple scales and integration with satellite borne radar polarimetric data for cost and time effective biomass mapping in areas of perpetual cloud cover like tropical and coastal forests.

For more information on the services of R&B Cormier from either mapping production or technology transfer please feel free to contact me at your convenience.

Yours sincerely,

Col J Jacob VSM (Veteran), CP and CMS (ASPRS), FRSPSoc (UK)

President

Mapping and Remote Sensing Group
